No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Patent No. US20020061848A1

GENERAL INFORMATION

APPLICANT: Bhatia, Ajay

APPLICANT: Skeiky, Yasir A.W.

APPLICANT: Probst, Perer

ITILE OF INVENTION: COMPOSITIONS AND METHODS FOR TREATMENT AND

TITLE OF INVENTION: COMPOSITIONS OF CHLAMYDIAL INFECTION

FILE REFERENCE: 210121.469C8

CURRENT APPLICATION NUMBER: US/09/841,132

CURRENT FILING DATE: 2001-04-23

NUMBER OF SEQ ID NOS: 599

SOFTWARE: FastSEQ for Windows Version 3.0/4.0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Length:
